Lead Full-Stack Developer
Y7 Design

August 2011 - July 2014 (3 years)

· We were building cloud-based web applications. We built a lot of school automation and restaurant automation systems.

EDUCATION

BSc in Computer Science
Yıldırım Beyazıt University
2014 - 2019

LANGUAGES

English (Professional)

Turkish (Native)

INTERESTS

Data Mining

Machine Learning

Artificial Intelligence

• I was lead full-stack PHP developer at Y7 Design. In this company, 5 developers worked in there.

• I gain project management experience and I learned object oriented in PHP.

About to Y7 Design

▪ On the Internet, one of the biggest need in our century, you need to make your (web)site have an impression as either individually or institutionally, and it is necessary to do some workings for the purpose of strengthening your site both visually and technically.

▪ The technical capacity and the visual quality that all websites, regardless of being institutional or individual, need fundamentally, it makes easier that website to gain its seat.

▪ In this context, a professional person or crew who can make necessary job is needed. Then, each website owner can not do this work healthfully.

▪ When especially the companies having a website understand that they can not get the enough efficiency, they need a person or a corporation to do the necessary job. As Y7 Design, we perform professionally the necessary actions to be done in accordance with your and your website's requirements.

🗄 OPEN SOURCE PROJECTS

artspin (https://github.com/y7usuf/artspin) - "artspin" is the best way to quickly and freely spin your articles. Currently, it is available for just Turkish Language. (PHP, Codeigniter, Python (Core system))

ubuntu-starter-pack (https://github.com/y7usuf/ubuntu-starter-pack) - To best Ubuntu configuration pack for student, developer and customer (Python, Bash Script)

💼 COMMERCIAL PROJECTS

These all projects are commercial and some of them on my github private repos. I can show them if you send me mail.

Translation Management App - Translation Management App is the automation of the translation process, eliminating repetitive and laborious manual tasks while enabling control, increasing collaboration and delivering greater efficiency. (Laravel 5.3 (RESTful Backend) , Angular 1.5.8, Vagrant (Homestead))
